Work Experience

Techsphere, Mumbai

Frontend Engineer (Full-Time)

Jul 2024 – Present

TheFinpedia - Fintech Marketing Platform

- Led development of a multi-platform social campaign planner and scheduling suite (Meta, LinkedIn, X) using React, TypeScript, and Node.js - increased campaign creation speed by **30%**
- Solo migrated the entire product from a monolith to a microfrontend architecture, while maintaining shared packages, module boundaries, and seamless cross-app integration.
- Engineered white-label subdomain support and SSO integrations (OAuth2/SAML), reducing partner onboarding time from weeks to days
- Contributed to scaling the product from **0 to 5000+ B2B clients** through performance optimization and UX improvements
- Participated in **5+ production deployments**, ensuring smooth rollout and system stability

Nakshatra IPMMI - Digital Community Platform

- Architected and deployed complete platform including UI architecture, API integrations, and CI/CD pipeline using Docker + GitHub Actions

EddyTools, Mumbai

Software Developer Intern

Jan 2024 – Apr 2024

- Enhanced an interactive drag-and-drop form builder with real-time validation and configurable rules - enabling teams to deploy custom forms under **5 minutes**.
- Improved website SEO through JSON-LD schema and structured metadata, boosting Lighthouse SEO scores by **20%**.

Projects

JobSearchAI - Agentic Job Discovery Platform [\[Live\]](#)

2024 – 2025

- Built an agentic, local-first job search platform that discovers roles by probing company ATS platforms (Greenhouse, Lever, Ashby, and 30+ others) directly, instead of relying on aggregators like LinkedIn or Indeed.
- Designed a multi-pass discovery pipeline in Next.js/TypeScript: LLM-based profile parsing, parallel ATS probing across a 465+ company seed database, and heuristic plus LLM fit ranking.
- Implemented tiered job harvesting with fallback from public ATS JSON APIs to Cheerio scraping to a Playwright headless browser, with filters for location, seniority, and recency.
- Architected a privacy-first, backend-minimal system: profile, API keys, and job history persist client-side via sql.js (SQLite in WASM) and IndexedDB, with only lightweight scrape/search API routes server-side.

Technical Skills

- **Frontend** React.js, Next.js, TypeScript, Angular, Redux, Zustand, React Query, Tailwind CSS, React Native
- **Backend & APIs** Node.js, Express.js, Nest.js, GraphQL, REST APIs, Serverless Functions, JWT/OAuth
- **Databases** PostgreSQL, MongoDB, Redis, Prisma
- **Cloud & DevOps** AWS (EC2, S3, Lambda), Azure, Docker, Kubernetes, Terraform, Jenkins, GitHub Actions, CI/CD
- **Languages, Tools & Testing** JavaScript, Python, Linux, Git, GitLab, Figma, WebSockets, Jest, Cypress, Playwright

Education

RIMT University

BCA – Bachelor of Computer Applications

2022 – 2025

CGPA: 8.5

Interests

- Embedded Engineering - microcontrollers, IoT hardware, low-level systems.
